

COMPREHENSIVE PSYCHIATRIC CARE

Program Overview

Homewood Health Centre has treated patients for addiction since we first opened our doors in 1883. The services we offer are part of Homewood Health's continuum of care.

Comprehensive Psychiatric Care (CPC) is a skills-based inpatient program aimed at reducing symptoms of recurrent and long-standing mental illness as well as improving quality of life. CPC is informed by Dialectical

Behaviour Therapy (DBT) and the skills acquired can be used to improve personal and professional relationships and regulate stress and emotions. This program is effective for emotional and behavioural issues, and persistent mental health issues including anxiety, chronic depression, concurrent disorders, mood disorders and personality disorders. CPC gives patients a healthy way to address the symptoms of their mental health.

Program Trends and Patient Characteristics

# of Patients	Age	Common Issues in CPC Patients		
179	Avg: 36 18 - 69	Depression 59%*	Substance Use 35%	Anxiety 32%

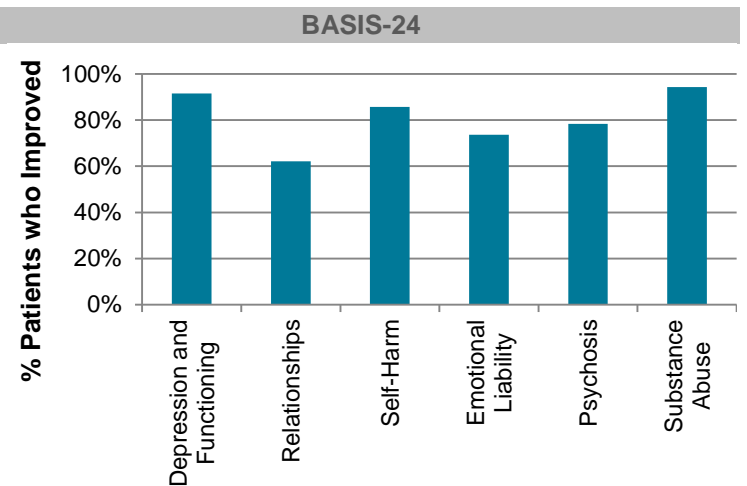

* Percent of CPC patients with these diagnoses.

Clinically Observed Outcomes

The Resident Assessment Instrument-Mental Health (RAI-MH) and the Behavior and Symptom Identification Scale (BASIS-24) are completed at admission and discharge to assess clinical outcomes.

The graphs below illustrate that CPC patients displayed positive rates of improvement (75% of patients improved, on average for RAI-MH; 81% on average for BASIS-24) for symptoms listed.

% of CPC Patients Who Improved in Clinically Observed Outcome Domains

Patient Satisfaction

Homewood is known for providing the highest quality of care to its patients. The patient comments left in our discharge survey are evidence of positive experiences and success during this phase of recovery.
